

Abstract**Composition for the Care and Maintenance of
Water-Resistant Surfaces**

There is provided a composition for the care and maintenance of water-resistant surfaces, which contains the following components:

- at least one mineral from the group of sheet silicates with an average mineral lamina size $< 10^{-7}$ m;
- a non-ionic surfactant; the ratio of sheet silicate to surfactant ranging from 5:1 to 1:7; and/or
- polyethylene glycol and/or polypropylene glycol.
